Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-27 are, drawn to an apparatus for separating leg quarters from the back portion of a poultry carcass back half, classified in class 452, subclass 167.
- II. Claims 28-42, drawn to a method for separating whole leg from the back portion of a poultry carcass back half, classified in class 452, subclass 167.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process of separating whole leg from the back portion of a poultry carcass back half can be performed by a different apparatus than claimed by the Applicant, such as the apparatus of Clifford U.S. Patent 5,080,632.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Mark Stallion on 03-28-2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
